GLOBAL MANAGEMENT CONSULTANTS

Cyber Risk Management

The Importance of Taking Positive Action

There have been an unprecedented number of high profile Cyber Attacks; the WannaCry ransomware is reported to be part of a random global cyber-attack that is alleged to have hit almost one hundred and twenty countries and involved 45,000 attacks. All allegedly emanating from a stolen cache of "cyber weapons". What is clear is that all types of businesses and organisations are ever more vulnerable as targets for attack by malware and the ransom demand that follows to 'restore' the data and/or systems under threat.

Stapleton International are a leading management consultancy with over 40 years serving clients in the energy, manufacturing, construction and marine sectors. As a global player in these sectors we recognised a gap in cyber safety and security training and intervention. In discussion with our clients, it has become clear that many organisations were unaware of how vulnerable they may be, or indeed what the levels of knowledge and understanding amongst staff was, or how their individual actions may impact upon, or indeed put organisations in danger from a Cyber-Attack.

A Return on Your Investment

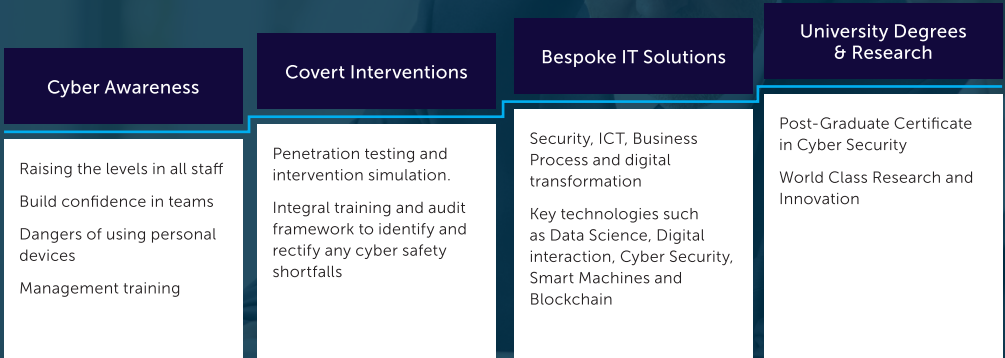

The complexity that cyber security brings to the workplace changes on an almost daily basis, however, it would appear to also be one that is often misunderstood and therefore not tackled directly – that is until something happens. Organisations are urged to recognise that there are unseen threats and potential breaches into their operations, systems, processes and people on a 24/7 basis. Investing in training can:

- ✓ Create a safer Cyber environment
- ✓ Improve protection from unauthorised access
- ✓ Design data security strategies to mitigate the probability of future threats
- ✓ Enhance stakeholder confidence in your organisation
- ✓ Defend and protect your future
- ✓ Save money – data breaches are expensive to rectify

What we Offer

At the very basic level, raising staff awareness of how their day to day work and personal activities can be the gateway that allows the threat to become a reality is critical. Following on from awareness raising we can undertake covert interventions that highlight key 'pressure'

points and areas of weakness. We work very closely with leading industry partners to be able to design and implement bespoke IT solutions. This is supported by our University partners in their world class research and higher-level University accredited courses.

Our Approach

We use the best trainers, experts and researchers to inform our techniques and approach as we want only the best for you, your teams and your organisation. Our delivery teams all have grounded industry experience in Cyber Security, in undertaking covert operations, in IT hardware and software and in delivery of top class University programmes of study.

Meeting your Needs

We are dedicated to listening to as well as understanding your Cyber Security requirements. We will offer advice on the best approach that suits your organisation; at all times, your needs are paramount. We can offer standard off the shelf packages right through the spectrum to entirely bespoke programmes with an emphasis on the co-development of company specific materials. We can deliver at your premises or off-site if that is required. We will work with you and your teams to create maximum benefits for your investment in this critical area.
